

# Hey? Where's the global cooling?

"[M]eteorologists...find that the atmosphere has been growing gradually cooler for the past three decades. The trend shows no indication of reversing."

--Time Magazine, June 24, 1974

"[Falling temperatures will cause the ice caps to sink into the ocean, producing] a global tidal wave that could wipe out a substantial portion of mankind, and the sea level could rise 60 to 100 feet."

- Paul Ehrlich, 1970.

"This cooling has already killed hundreds of thousands of people. If...no...action is taken, it will cause world famine, world chaos and world war...before the year 2000." -- Lowell Ponte "The Cooling" (1976)

## How could all those *experts* be so wrong? Looks like they didn't learn their lesson; extreme action based on inconclusive data is dangerous.

The...Intergovernmental Panel on Climate Change warns of 'abrupt and irreversible' damage if we don't take immediate action [against global warming]."

--Time Magazine, Nov 21, 2007

"Greenland's massive ice sheet...may disappear completely within the next thousand years if global warming continues at its present rate."

--National Geographic News

"If the world warms by six degrees...Natural disasters become routine and catastrophic flooding leaves major cities abandoned."

-Sam Champion, Good Morning America
