Why is the Green Movement silencing dissenters?

Do you think Global Warming is proven fact? Have you ever thought, maybe it's just what they are feeding you?

Ross Gelbspan, editor of the *Boston Globe* says, "Not only do journalists not have a responsibility to report what skeptical scientists have to say about global warming. They have a responsibility *not* to report what those scientists say."

TIME magazine science editor, Charles Alexander comes right out with it: "I would freely admit that on [global warming] we have crossed the boundary from news reporting to advocacy."

Dissenters are compared to holocaust deniers:
"Let's just say that global warming deniers are now on a par with Holocaust deniers" - *Ellen Goodman, Boston Globe*

More than 400 prominent scientists (listed here) disagree with the Ecogenda, even when it is treated as indisputable fact, just like the global cooling theories of the 1970s -those theories didn't turn out to be true after all.

What is the Environmental Movement so afraid of hearing?
